

APPLICATIONS

Eni Mix 2T is a lubricant developed for 2-stroke engines of scooters and motorcycles, air- or liquid-cooled. According to the type of engine, the product can be manually mixed into fuel tank or used in the self mixing lubricating system.

CUSTOMER ADVANTAGES

- **Eni Mix 2T** is formulated using a low ash content additive package which minimizes combustion chamber deposits, spark-plug fouling and the blocking of exhaust ports. Its detergent properties minimize lacquer formation and carbon deposits thus preventing piston-ring sticking.
- **Eni Mix 2T** reduces rust and corrosion in the engine resulting from attack by combustion moisture and acids.
